

Aditya Indoori

Software Development Engineer II, AWS Identity · Seattle, WA
+1 571-375-9375 · indooriaditya@gmail.com · [LinkedIn](#) · [Portfolio](#)

SUMMARY

Software Development Engineer II at AWS Identity with 6+ years building cloud platforms and developer experiences at scale. I led multi-Region root user sign-in supporting 36M+ weekly sign-ins and the [aws login experience for the AWS CLI](#), alongside mobile authentication, observability, and developer productivity initiatives.

My work spans distributed systems, security, API integrations, and applied AI: connecting LLM agents to authenticated AWS services through MCP and helping startup and enterprise teams move AI ideas toward deployment with Python, JavaScript, and the OpenAI API. I also contribute as an ACM Middleware MIND program committee member, startup mentor and judge, and security researcher.

EXPERIENCE

Amazon Web Services (AWS)

Seattle, WA

Software Development Engineer II

Sep 2022 – Present

- **Multi-Region resilience.** Led the design and delivery of [active-active AWS root user sign-in](#), supporting **36M+ weekly sign-ins** at **99.95% availability per Region**. Built on containerized Spring services, Amazon ECS with AWS Fargate, Route 53 weighted routing, ALBs, DynamoDB, and KMS, with automated and manual failover; sign-in is now served across **3 AWS Regions**.
- **Secure developer access.** Designed and launched [aws login for the AWS CLI](#), recording **25,000+ sign-ins on launch day**. Delivered OAuth 2.0 authorization code flow with PKCE for [same-device and remote browser-based sign-in](#), short-lived credentials instead of long-term access keys, and centralized control through AWS Organizations SCPs. Partnered with AWS CLI, IAM Authorization, and Product Management teams on the global launch.
- **Observability.** Enhanced tracing and monitoring with OpenTelemetry and Amazon CloudWatch, reducing debugging time by **30%**.
- **CI/CD and operational efficiency.** Led cross-functional developer-tooling and pipeline improvements, reducing build times by **15%** and operational overhead by **23%**.
- **Developer productivity.** Designed internal tools that streamlined cloud infrastructure provisioning for **hundreds of engineers**. Mentored **3 engineers** through design reviews and guidance on cloud architecture, testing, security, and operational practices.

Software Development Engineer

Jun 2020 – Sep 2022

- **Mobile authentication · 2022.** Led design and launch of a unified authentication and authorization SDK for iOS and Android with asymmetric encryption, secure storage, and in-app browser deep links, bringing modern sign-in to **1M+ users** of AWS mobile apps.
- **SSO performance · 2021.** Optimized AWS SSO sign-in with a React single-page app, Webpack code-splitting, compressed and minified assets on Amazon S3, and CloudFront edge caching. JMeter load testing guided the work, cutting latency by **10 seconds (65%)** across **5M+ weekly sign-ins**.
- **Application security.** Mitigated SSRF, XSS, and remote code execution vulnerabilities across authentication services.

Daon Trusted Identity Services

Alexandria, VA

Software Engineer Intern

Jun 2019 – Aug 2019

- Migrated a legacy Spring authentication service to Spring Boot, cutting build time by **1.5 minutes** and improving maintainability.
- Architected a RESTful microservices test framework with TestNG, Mockito, and parameterized assertions, increasing regression coverage by **28%** and strengthening API reliability.

George Mason University

Fairfax, VA

Graduate Teaching Assistant, Information Sciences & Technology

Jan 2019 – May 2019

- Taught labs in IT problem-solving and object-oriented programming in Java, and wrote assignment questions.

Android Developer, Special Education & Disability Research

Aug 2018 – Dec 2018

- Built accessible Android apps in Java and XML with TalkBack integration and dynamic text scaling for people with disabilities; automated accessibility testing reached **98% WCAG compliance**.

PROJECTS

AWS Sign-In MCP Server 2025

Implemented the internal AWS Sign-In federation MCP server, letting LLM agents running as MCP clients access AWS services with authenticated credentials.

Authorized Access to AWS Consoles 2024

Policy-based authorization that treats AWS consoles as AWS resources, letting customers block public console access using data perimeters such as network IP ranges.

Biometric Vehicle Ignition Control 2018

Built a Raspberry Pi vehicle security system in Python, combining OpenCV face recognition, fingerprint authentication, and alcohol breath detection to control engine ignition.

Additional shipped systems: [multi-Region authentication resilience \(2023\)](#), [the unified mobile authentication SDK \(2022\)](#), and [SSO latency optimization \(2021\)](#) are detailed under Experience.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, Go, C, HTML/CSS

AI & ML: MCP, LLMs & Generative AI, OpenAI API, TensorFlow, PyTorch

Frameworks & Libraries: Spring Boot, React, Webpack, AWS SDK, AWS CDK, JUnit, Mockito, TestNG, Selenium

Cloud & DevOps: Route 53, ALB, ECS Fargate, S3, CloudFront, DynamoDB, VPC, KMS, CloudWatch, OpenTelemetry, Docker, Kubernetes, Terraform, CI/CD, Git

Security: OAuth 2.0 & PKCE, OIDC, JWT, WebAuthn, AuthN/AuthZ, OWASP, SSRF, CSRF, XSS, RCE, SQL Injection, Open Redirect

Tools: JMeter, Jupyter, NumPy, Pandas, Android Studio, MATLAB

EDUCATION

Master of Science in Computer Science

George Mason University, Fairfax, VA · 2018 – 2020

Bachelor of Technology in Electronics & Communication Engineering

Gokaraju Rangaraju Institute of Engineering and Technology, Hyderabad, India · 2014 – 2018

RECOGNITION

- **Program Committee Member**, MIND workshop on MLOps in Distributed Systems at [ACM/IFIP Middleware 2025](#) and [ACM Middleware 2026](#)
- **Peer Reviewer**, [SN Computer Science \(Springer Nature\)](#)
- **Judge**, University of Washington Dempsey Startup Competition, 2025
- **Mentor**, University of Washington Nucleate Startup Accelerator, 2024
- **Delegate**, [Harvard HPAIR Conference](#), 2024
- **Hall of Fame**, [eBay Security Center](#), for security research
- **2nd Place** with team CoviSave, [Dell Technologies Unbounded Hackathon](#), 2021
- **Bug Bounty Awards**, [HackerOne](#), for XSS, SSRF, and CSRF findings, 2020
- **2nd Place** ("Patch: Smart Home Repairs") and **Crowd Favorite** ("EStyle"), Tech Starters, George Mason University, 2018
